Summary

Flutter Developer with hands-on experience in Dart, BLoC, and MVVM. Passionate about clean code, version control with Git/GitHub, and building real-world apps. 2 years of experience working on self-initiated Flutter projects, with practical internship experience developing production apps deployed to Google Play and the App Store.

Experience

Flutter Developer Intern | Fassla (Dec 2025 – Mar 2026)

Completed a 3-month internship working on live production mobile applications, where I developed and maintained Flutter apps published on Google Play and the App Store. I collaborated with the team on implementing features, fixing bugs, and improving performance, while working with Flutter, BLoC, and REST APIs, and gained hands-on experience across the full development lifecycle.

Technical Mentor | Remote (Sep 2025 – Present)

Leading weekly sessions focused on software engineering best practices and mobile app development using Flutter.

Projects

voyage hub

Private Repository

Voyage Hub | Tourism App (Client & Company Portals) – 2025

Built independently during my internship at Fassla, this project is a dual-portal mobile system including a customer app for booking trips and a company app for managing reservations. It features a seamless booking flow with real-time confirmations and notifications, while enabling the company to review and manage requests efficiently. Developed using Flutter, BLoC, Clean Architecture, and REST APIs for real-time data synchronization.

RemindMe

[GitHub](#) Feb 2025

Task management app with cloud synchronization and modern state architecture

Integrated Firebase for user authentication and real-time data storage

Refactored approximately 80% of the codebase to implement a structured MVVM architecture and improve maintainability, Used Hive for local storage and offline capabilities

Connected with external API to fetch and sync task data

Lavender-Mental Health Therapy App

Private Repository

Built a mental health app for booking and managing therapy sessions, focusing on seamless UX, secure data flow, and clean, scalable architecture.

Implemented Clean Architecture with BLoC for scalable state management and clear layer separation (data, domain, presentation). Integrated RESTful APIs and Hive for secure data handling, offline support, and seamless cross-device experience.

Smart Ahwa Manager App

Education

Bachelor of Science in Information Systems Tiba

Sep 2021 - Oct 2025

Academy, Graduation: 2025

- Relevant coursework: Programming Fundamentals, Data Structures, Object-Oriented Programming, Databases, and Software Engineering.
- Current GPA : 3.0 / 4.0

Skills

Technical Skills:

Mobile App Development with Flutter | Dart Programming | State Management(Provider,Bloc)

Hive for local storage | APIs | UI/UX Design Principles | Git & GitHub

Responsive Design & Adaptive Layouts | Basic SQL & NoSQL Databases(e.g.SQLite,Firebase)

Firebase Integration (Authentication, Firestore, Cloud Functions)

Languages:

- Arabic (Native)
- English (Good)
